

Introducing Nikki foiling dinghy

Nikki is the very latest high-performance one-design foiling dinghy which is both stable and safe, while being easy to rig, launch and sail, suited to youth and light sailors of a wide range of ages and abilities.

We are very proud to announce that Nikki is now available from Glide Free.

Versatile – Foiling on Nikki is simply breathtaking!

Nikki is also highly versatile, able to be sailed in displacement, planing or gliding modes. This means Nikki can be sailed in any wind strength to suit your skill level. Even without lifting foils Nikki easily planes upwind and down, making it an all-round fun boat to sail.

Stable hull – The highly developed ‘scow’ hull shape is very stable & comfortable, making Nikki fast and easy to sail in all conditions. Launching from the trolley and sailing away in knee deep water is easy.

Safety - Ride height control is fully adjustable with the unique retractable wand providing safe foiling in all conditions without crashes. The patented Glide Free foiling system used on Nikki greatly simplifies foil control, eliminating the need for complexities such as adjustable tiller, gain adjustment or rake control and also prevents pitchpole.

Foiling - Nikki lifts off easily in light winds so you can experience the very best foiling can offer. You can even gybe and tack on the foils which up till now has only been possible on the Moth and AC/GP50!
The wide ‘wings’ effortlessly power the boat upwind, especially when foiling and the foil controls are extremely simple.

MARINE LIFESTYLES

Easy handling - Launching is greatly simplified as the centreboard and rudder are inserted from above and lifting foils clip on and off and can be held in position with a brake to improve handling. The boat can be easily launched and retrieved by one person from the beach trolley provided, even in shallow water.

Robust construction - The light weight hull is production moulded of high-quality glass epoxy & foam, making it rugged, robust and reliable while also being durable, affordable and unsinkable.

High performance rig- The unique integral curved vang track enables the unique high-performance S-boom with deck-sweeping sail to provide power and depth down low in the sail where it is most effective and keep the leach tight for upwind foiling performance. The Nikki rig consists of a full carbon, two-piece mast with sail track, making hoisting of the sail easy on-shore with a halyard and the sail can also be lowered on the water for safety.

Simplicity - The wide wings which provide the power necessary for foiling are easily clipped on to the hull in seconds. No need to lace up trampolines and the boat can be easily stored in standard racks. Foils are inserted from above and lifting foils clipped in place, making Nikki easy to transport, store, rig and launch.

Options - Nikki can be supplied as a high performance, winged, non-foiling 'displacement' dinghy 'Nikki D' or as the fully foiling version 'Nikki F'. Both versions come with a choice of two rigs 5.5 and 6.5 sqm, to suit your body weight, skill level and local sailing conditions.

Dimensions - Nikki is 2.9m long, 1.8m wide and weighs in at just 25Kg. The two rigs available are 5.5sqm and 6.5 sqm.
